

**CURIOS** = A loosely-coupling of Drupal and RDF store

## Key features

- Create/maintain linked datasets **directly**
- Content Management System's **friendly GUI**
- Reuse **existing** CMS modules/plugins
- **Flexible access control** policy/user groups

Domain ontology

Meta-ontology

CMS Entities

- Extended from a simple upper ontology (customisable)

- Configurable **browsing classes**
- Define **mappings**
- Allow **validation**

- Stored in Drupal's database (schema only)
- Browsable by users
